Listing details

Title: Ships Recycling : 25-built_in-old Vessels Wanted
Ref No: RF995562
Price: 1.00
Condition:

Additional information

Description:

I'm working for a company with more than 20 built_ins experience, the company's group with an annual turnover in excess of RM800 million is Malaysia's largest recycling company.

Established in 1985 as the country's pioneer waste recycling company, it is now the only fully integrated waste recycler, covering the recycling of ferrous and non-ferrous metals, plastics, cables, paper and land fill management and material recovery.

The Group's consistent research and development has enabled us to venture into downstream activities and processes to further value-add to wastes recycled.

As Malaysia's biggest exporter of recycled non-ferrous metals and plastics the Group's success is attributed to the stringent quality controls by our Quality Assurance Department.

The long standing relationship with our suppliers and buyers, big and small, local and foreign is testimony of the good quality controls that we practice that result in quality finished products.

Now, we expand our business to another recycle industry; which is Ships Recycling. It's the first company in Malaysia doing this recycling. As a pioneer in this country, we have Malaysian Government endorsement to implement the 'green' industry.

As a testament of our achievements the Group was awarded the following international certifications:

-ISO14001 – for implementing Enviromantal Management Systems - Specification with Guidance for Use -Operation of A Plant for the Recycling of Waste Materials.

-ISO 9001 - in Quality Management Systems – Requirements- Recycling of Metal Waste & Scrap.

-ISO 9001 - in Quality Management Systems – Requirements-Recycling of Plastic Waste & Scrap

-ISO 9001 - in Quality Management Systems – Requirements-Recycling of Cable & Copper Granulation Production
